ESS7-2014, ed. 2.1 - Multilevel Data

Overview

Identification	ESS7MDHe02.1
-----------------------	--------------

Abstract

ESS Multilevel Data

The purpose of the ESS MD is to make it easier for the research community to analyse the ESS-respondents with reference to the context they live in.

There are numerous sources containing contextual data. The ESS MD does not contain everything available. The selection of variables is based on the recommendations in the report of the ESS Upgrade and Planning Group on Contextual Data: 'Conceptual and Statistical Issues in Multilevel Analysis'.

Citation Requirement

Users are obligated to refer to producer and distributor of the data by writing the following in forewords or footnotes of publications: "(Some of) the data applied in the analysis in this publication is based on the ESS Multilevel Data. The data is provided by [Original data source], and prepared and made available by NSD - Norwegian Centre for Research Data. Neither [Original data source] nor NSD are responsible for the analyses/interpretation of the data presented here."

Individual Level

The European Social Survey (ESS) is an academically-driven multi-country survey, which has been administered in over 30 countries to date. Its three aims are, firstly - to monitor and interpret changing public attitudes and values within Europe and to investigate how they interact with Europe's changing institutions, secondly - to advance and consolidate improved methods of cross-national survey measurement in Europe and beyond, and thirdly - to develop a series of European social indicators, including attitudinal indicators.

All respondents from ESS round 7 are included. The following topics are covered in the ESS Round 7 data:

- Media and social trust
- Politics
- Subjective well-being, social exclusion, religion, national and ethnic identity
- Immigration
- Health and Inequality
- Gender, Year of birth and Household grid
- Socio-demographics
- Human values

Country Level Data

Contains contextual information on all countries covered in ESS7-2014.

The country level data have been compiled from various well-known sources:

- Eurostat (<http://ec.europa.eu/eurostat/data/database/>)
- OECD (<http://stats.oecd.org/index.aspx>)
- UNESCO (<http://uis.unesco.org/>)
- The United Nations (<http://data.un.org/>)
- World Bank (<http://data.worldbank.org/indicator>)
- Freedom House (<http://www.freedomhouse.org/>)
- Bertelsmann Stiftung (<http://www.bti-project.org>)
- The CIRI Human Rights Project (<http://www.humanrightsdata.com/>)
- Democracy Barometer (<http://www.democracybarometer.org/>)
- The Comparative Political Data Sets (<http://cpds-data.org/index.php/data>)
- Database of Political Institutions (<https://publications.iadb.org/handle/11319/7408>)
- Transparency International (<http://www.transparency.org/>)

And the following topics are covered:

- Demography: Area of the region, Median age, Old age dependency ratio, Population size, Population density, Ethnolinguistic Fractionalization, Demographic balance and crude rates
- Economy: GDP per Capita, Gini coefficient, Social expenditure, Unemployment
- Education: Enrolment statistics, Number of Students
- Composite measures: Human development index (HDI), Gender Inequality Index (GII), Freedom in the World, Bertelsmann Transformation Index, CIRI Human Rights Project, Democracy Barometer, Worldwide Governance Indicators
- Political institutions: Comparative Political Data Set, Database of Political Institutions
- Health: Fertility rate, Life expectancy, Infant mortality rate, Health expenditure, Health workforce, World Bank health indicators
- Crime: International homicide rate, Corruption Perceptions Index, Crimes recorded by the police, Prison population
- Immigration: Immigrants, Emigrants, Asylum applicants, Foreigners, Migrant Integration Policy Index, OECD International Migration Database

ESS Regional Level Data

Contains contextual information on all countries covered in ESS7-2014.

NUTS data have been compiled from Eurostat (<http://epp.eurostat.ec.europa.eu/portal/page/portal/eurostat/home>).

And the following topics are covered:

- Demography: Area of the region, Population size, Population density, Demographic balance and crude rates
- Economy: GDP per Capita, Unemployment
- Education: Number of Students
- Health: Fertility rate, Life expectancy, Infant mortality rate, Health workforce
- Crime: Crimes recorded by the police

For further information on the data and data sources, see the documentation of variable groups.

In case of any discrepancy between the data presented here and the data presented on the original data sources' websites or publications, the user should rely on the data presented by the original data source.

Variables Group(s)

Dataset contains 81 group(s) total - showing a subset of 8

Group GDP, Eurostat

Data source

Eurostat

Eurostat is the statistical office of the European Union situated in Luxembourg. Its task is to provide the European Union with statistics at European level that enable comparisons between countries and regions. The data presented here have been compiled by the ESS MDR from the Eurostat dissemination database (<http://ec.europa.eu/eurostat/data/database>).

Variable information

Short description

Gross domestic product (GDP) is an indicator calculated by Eurostat based on data from the European System of Accounts ESA 1995, using a harmonized methodology. The ESA95 indicators are sent to Eurostat by the National Statistical Institutes. GDP (gross domestic product) is an indicator of the economic activity of a country or a region. It reflects the total value of all goods and services produced less the value of goods and services used for intermediate consumption in their production. For more information see the source datasets here (http://ec.europa.eu/eurostat/data/database?node_code=nama_r_e3gdp) and here (http://ec.europa.eu/eurostat/data/database?node_code=nama_10r_3gdp).

Geographical coverage

All ESS countries covered, except for Switzerland.

Group Gini coefficient

Data source

Eurostat

Eurostat is the statistical office of the European Union situated in Luxembourg. Its task is to provide the European Union with statistics at European level that enable comparisons between countries and regions. The data presented here have been compiled by the ESS MDR from the Eurostat dissemination database (<http://ec.europa.eu/eurostat/data/database>).

Variable information

Short description

Gini coefficient based on equivalised household disposable income, after or before taxes and transfers. The Gini coefficient is defined as the area between the Lorenz curve (which plots cumulative shares of the population, from the poorest to the richest, against the cumulative share of income that they receive) and the 45° line, taken as a ratio of the whole triangle. The values of the Gini coefficient range between 0, in the case of "perfect equality" (i.e. each share of the population gets

the same share of income), and 1, in the case of "perfect inequality" (i.e. all income goes to the individual with the highest income).

To take into account the impact of differences in household size and composition, the total disposable household income is "equivalised". The equivalised income attributed to each member of the household is calculated by dividing the total disposable income of the household by the equivalisation factor. Equivalisation factors can be determined in various ways. Eurostat applies an equivalisation factor calculated according to the OECD-modified scale first proposed in 1994 - which gives a weight of 1.0 to the first person aged 14 or more, a weight of 0.5 to other persons aged 14 or more and a weight of 0.3 to persons aged 0-13.

Data sources and compilation practices

Data for most countries are drawn from household surveys, but in the case of several Nordic countries they come from comprehensive population registers integrated with survey data. The use of household surveys implies that data are affected by various sampling and non-sampling errors, whose importance can vary from country to country. It also implies that the data exclude some people at the bottom of the income distribution, such as those without a regular address (e.g. homeless), irregular residents and people living in institutions. Survey results may also be affected by under-reporting, which may be especially significant at the top and bottom of the distribution.

For more information see the source dataset (http://ec.europa.eu/eurostat/data/database?node_code=ilc_di12).

Geographical coverage

Group Worldwide Governance Indicators

Data source

The World Bank

The Worldwide Governance Indicators (WGI) project is based on a research program of the World Bank. The indicators are a compilation of the perceptions of a very diverse group of respondents, collected in large number of surveys and other cross-country assessments of governance. Some of these instruments capture the views of firms, individuals, and public officials in the countries being assessed. Others reflect the views of NGOs and aid donors with considerable experience in the countries being assessed, while others are based on the assessments of commercial risk-rating agencies.

Data Citation

The World Bank: Worldwide Governance Indicators The WGI are produced by:

Daniel Kaufmann, Natural Resource Governance Institute (NRGI) and Brookings Institution

Aart Kraay, World Bank Development Research Group

Variable information

Short description

The Worldwide Governance Indicators comprise the following variables:

- Voice and Accountability: capturing perceptions of the extent to which a country's citizens are able to participate in selecting their government, as well as freedom of expression, freedom of association, and a free media.
- Political Stability and Absence of Violence: capturing perceptions of the likelihood that the government will be destabilized or overthrown by unconstitutional or violent means, including politically-motivated violence and terrorism.
- Government Effectiveness: capturing perceptions of the quality of public services, the quality of the civil service and the degree of its independence from political pressures, the quality of policy formulation and implementation, and the credibility of the government's commitment to such policies.
- Regulatory Quality: capturing perceptions of the ability of the government to formulate and implement sound policies and regulations that permit and promote private sector development.
- Rule of Law: capturing perceptions of the extent to which agents have confidence in and abide by the rules of society, and in particular the quality of contract enforcement, property rights, the police, and the courts, as well as the likelihood of crime and violence.
- Control of Corruption: capturing perceptions of the extent to which public power is exercised for private gain, including both petty and grand forms of corruption, as well as "capture" of the state by elites and private interests.

Data sources

The WGI compile and summarize information from 32 existing data sources that report the views and experiences of citizens, entrepreneurs, and experts in the public, private and NGO sectors from around the world, on the quality of various aspects of governance. The WGI draw on four different types of source data:

- Surveys of households and firms (9 data sources including the Afrobarometer surveys, Gallup World Poll, and Global Competitiveness Report survey)
- Commercial business information providers (4 data sources including the Economist Intelligence Unit, Global Insight, Political Risk Services)
- Non-governmental organizations (11 data sources including Global Integrity, Freedom House, Reporters Without Borders)
- Public sector organizations (8 data sources including the CPIA assessments of World Bank and regional development banks, the EBRD Transition Report, French Ministry of Finance Institutional Profiles Database)

Geographical coverage

All ESS countries covered.
